

Name:

Class:

Date:

$$f(x) = x^2 + 5x - 1$$

$$f(x) = x^2 - 6x + 9$$

$$f(x) = x^2 - 3x + 4$$

Discriminant:

Is it +, -, or 0?

What does this tell us about the number of solutions to the above function?

Discriminant:

Is it +, -, or 0?

What does this tell us about the number of solutions to the above function?

Discriminant:

Is it +, -, or 0?

What does this tell us about the number of solutions to the above function?

Find solutions using quadratic formula

{ , }

Find solutions using quadratic formula

{ , }

Find solutions using quadratic formula

{ , }

Sketch Graph:

Sketch Graph:

Sketch:

$$f(x) = x^2 + 5x - 1$$

What are the x-intercepts of the function?

What are the coordinates of the vertex?

The graph of the axis of symmetry is at

x=

Label the x-intercepts and vertex on the graph and draw the axis of symmetry.

$$f(x) = x^2 - 6x + 9$$

What are the x-intercepts of the function?

What are the coordinates of the vertex?

The graph of the axis of symmetry is at

x=

Label the x-intercepts and vertex on the graph and draw the axis of symmetry.

$$f(x) = x^2 - 3x + 4$$

What are the x-intercepts of the function?

What are the coordinates of the vertex?

The graph of the axis of symmetry is at

x=

Label the x-intercepts and vertex on the graph and draw the axis of symmetry.
